

Kirushna Priya T

Bengaluru, Karnataka, Pin: 560037 • kirushna203@gmail • 9933252021 • <https://kirushnapriya-portfolio.netlify.app>

Summary

AI Engineer experienced in automating workflows, LLM fine-tuning, orchestrating Gen AI systems, and building intelligent assistants. Strong focus on QLoRA-based optimization, open-weight models, and deploying reproducible AI pipelines on limited compute.

Experience

11fps

AI Engineer

Bengaluru, Karnataka

April 2026 - Present

Automating the end-to-end AI Filmmaking workflow by developing modular generative pipelines focused on character consistency, asset generating and rendering queue which reduced the production time by 40 – 50%.

Seranai

AI Research Intern

Remote

March 2026

Designed and documented Claude Skills on FOUNDRY framework and structured them for integration into SkillsMP platform, analysed Y Combinator startups and open-source AI tools for founder-focused applications

Manipal Hospitals

Clinical Perfusionist

Bengaluru, Karnataka

December 2023 – April 2025

Operated 150+ high-complexity cases using complex systems – CPB, ECMO, IABP, VAD. Trained 12 intern students and collaborated across departments transferable to multi-disciplinary communication.

Education & Certifications

Microsoft AI Engineer Program

Certified, Simplilearn, 2025

AI Career Accelerator Program

Certified, AI for Techies, 2025

Chettinad Academy of Research and Education, Chennai

B.Sc. in Perfusion Technology, 2022

Projects

QLoRA Fine-tuning of Qwen-11B on Dolly Dataset

Fine-tuned Qwen 11B using QLoRA with 4-bit quantization on Google Colab (T4 GPU), processed Databricks Dolly Dataset for instruction tuning and built modular training + inference pipeline. Reduced memory footprint while improving instruction-following performance vs base model

Employee Turnover Analysis

Developed and optimized machine learning models (Random Forest, Logistic Regression, Gradient Boosting) using SMOTE and robust feature engineering, achieving 99% prediction accuracy. Built a Flask-based frontend for real-time predictions, containerized the application with Docker, and deployed it on AWS Elastic Beanstalk, delivering actionable customer-retention insights driven by AUC- and recall-focused evaluation.

Technical Skills

Programming & ML: Python, Linux, pandas, NumPy, scikit-learn, supervised & unsupervised learning, feature engineering, model evaluation (AUC, recall), data cleaning, statistical analysis, seaborn, matplotlib, Selenium

Deep Learning & NLP: PyTorch, Keras, LLMs, Gemini API, prompt engineering, tool calling, LoRA, QLoRA

GenAI & Platforms: LLM API integration, Hugging Face, Openclaw, ComfyUI, N8N, working with GPU on Vast.ai

MLOps & Deployment: Flask, Docker, AWS Elastic Beanstalk, interactive UIs (Gradio, Streamlit)

Collaboration: Git, GitHub, version control workflows, code reviews, documentation
